Rock Paper Scissor Lab

This project is an interactive hand-game duel using Pygame. It introduces students to dictionary-based rule lookups, automated CPU decision-making, temporary result display timers, and modular UI button interaction within an object-oriented codebase.

What's Provided

A working Rock Paper Scissors game with:

- Three interactive choice buttons (`ROCK` , `PAPER` , `SCISSORS`) with mouse hover and click response states
- An automated computer opponent selecting moves at random
- Live scoreboard tracking player score and CPU score independently
- Timed result display that shows the outcome for 1.8 seconds before clearing picks for the next round

It has **one deliberate bug** and **three optional features** left as tasks to implement. You are expected to **analyze**, **interact with an AI assistant**, and **complete/fix** the game to make it fully functional and more interesting.

Use an LLM (e.g. ChatGPT or Claude) as your debugging and pair-programming partner for this lab.

Getting Started

Setup

1. Make sure you have Python 3.10+ installed.
2. Install dependencies:

pip install pygame

3. Run the game:

python main.py
Controls: Left-click colored pads to repeat the sequence. Press R to restart after Game Over.

Tasks to Complete

Each task must be completed using an iterative process involving LLM suggestions and your critical code review.

Task 1: Fix the inverted outcome evaluation bug

Whenever the player throws a winning hand against the computer, the game awards the point to the CPU instead of the player. Correct the outcome evaluation logic so standard rules apply (Rock beats Scissors, Scissors beats Paper, and Paper beats Rock).

Task 2: Implement "First to X Wins" match victory state

The game currently loops endlessly with no decisive match conclusion. Introduce a target win ceiling that halts play when reached, presents an end-of-match victory banner declaring the ultimate winner, and prompts the player to restart.

Task 3: Implement adaptive AI pattern tracking

The computer currently picks its moves entirely at random. Introduce adaptive intelligence that records the player's recent throw tendencies and dynamically biases CPU selections toward the counter-move when a player repeatedly favors a specific option.

Task 4: Implement Procedural Gesture Icons & Reveal Animations

Selections are currently rendered as plain text labels. Create distinct visual graphic icons for Rock, Paper, and Scissors, adding a synchronized countdown or shaking reveal animation before displaying both choices each turn.

Expected Behavior

- Clicking any choice button selects that move, rolls a CPU choice, and evaluates the winner correctly.
- Rock beats Scissors, Scissors beats Paper, Paper beats Rock, and identical choices result in a Draw.
- Scores increment accurately and the round outcome stays visible for 1.8 seconds before clearing picks back to

```

Submission Checklist

Submission is only the following three things:

- [] A 10-second video of gameplay **before** your changes, showing the bug/broken behavior
- [] A 10-second video of gameplay **after** your changes, showing the bug fixed and the new features working
- [] The Chat/LLM used page link, with the complete chat history
- this is readme content

ChatGPT said:

You said:

yes done i have taken the video is the screenshot i pasted is correct?

ChatGPT said:

You said:

what chnages I must do in that file

ChatGPT said:

You said:

done I have relaced the content which you gave in game_engine.py

ChatGPT said:

You said:

After editing game/game_engine.py, my test result is: broken. Help me with the exact next step.

ChatGPT said:

You said:

no no i got it the buttons are working properly now by the way what we need to get in first task we are supposed to get

ChatGPT said:

You said:

yes my game is working according to the rules you specified above

ChatGPT said:

You said:

yes done with task 1

You said:

give me all the updated code all at once to me...if i paste myself it is giving me indenation errors so

ChatGPT said:

You said:

what mst be the output of this task

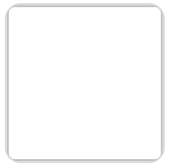

ChatGPT said:

You said:

before i was atleast able to click the buttons but now it is not coming

ChatGPT said:

You said:

ChatGPT said:

You said:

Okay yes now it works...like it is giivng me the correct score and also if i press R it resets

ChatGPT said:

You said:

yes done...Should i make the video of this also?

ChatGPT said:

You said:

then I will record the video after all tasks only

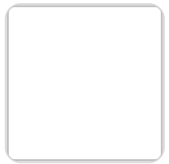

ChatGPT said:

You said:

continue with task 3

ChatGPT said:

You said:

ChatGPT said:

You said:

what is the task 3

ChatGPT said:

You said:

ok next

ChatGPT said:

You said:

bro give the updated code now

ChatGPT said:

You said:

I asked for the only chnaged code you gave evrything ok fine leave what next

ChatGPT said:

You said:

yes yes the cpu choosing paper many times in start after then again it chooses scissors or rock

ChatGPT said:

You said:

yes done

ChatGPT said:

You said:

Pasted text(20261022-182909).txt
Document

ChatGPT said:

You said:

next

ChatGPT said:

You said:

it gives me indentation error bro give me correct code which resolve tha

ChatGPT said:

You said:

ok done

ChatGPT said:

You said:

what this actually does

ChatGPT said:

You said:

ok next

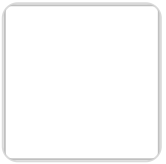

ChatGPT said:

You said:

ok

ChatGPT said:

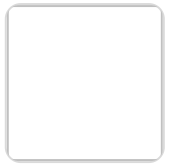

You said:

i got something like this

ChatGPT said:

You said:

it is still there it self and also the restart button is hided behind

ChatGPT said:

You said:

↪

see it still hided behind

ChatGPT said:

You said:

now we need only the restart button give me the code one last time

ChatGPT said:

You said:

see i guess its working properly now

ChatGPT said:

You said:

this is also correct right hand gestures went up

ChatGPT said:

You said:

yes i have commiteed

ChatGPT said:

You said:

yes now done with the after video also
